

Join us to find a new way to treat ulcerative colitis (UC)

Join this clinical research study that is looking at an investigational treatment for people with UC

The ABTECT-2 Study is looking at how safe an investigational medication is and whether it reduces symptoms in people with UC.

We plan to enroll a wide variety of participants because UC and medications may affect people differently based on their age, sex, gender, and race/ethnicity.

You, or someone you care for, may be able to take part if you/they:

- are 16 years of age or older
- have been diagnosed with UC
- have experienced inadequate, no response, or loss of response while on other or previous UC medication.
