

# Ulcerative colitis: Let's work together to try and broaden the treatment HORIZON

Join this clinical research study of an investigational drug that may provide a treatment option for ulcerative colitis

The HORIZON Study is looking at the safety and effectiveness of an investigational study drug for adults with moderate to severe ulcerative colitis (UC). The study drug will be compared to an approved drug for the treatment of UC.

The study drug is designed to block 2 proteins in the body that contribute to the inflammation that is thought to lead to people getting UC.

## Who can take part?

You may be able to take part if you:

- are 18 years of age or older
- have a confirmed diagnosis of moderate to severe UC for at least 3 months
- have tried at least 1 previous therapy for UC that did not work
- have not previously received adalimumab.

We plan to enroll a wide variety of participants because UC and medicines may affect people differently based on their age, sex, gender, race, and ethnicity.

This study has been reviewed by an Institutional Review Board (IRB)/Ethics Committee (EC), which protects the rights, safety, and well-being of the participants.
